

THE COGNITIVE STATE SYSTEMS™ CODEX

PUBLIC OVERVIEW · FOUNDING EDITION · 2026

Cognitive Calibration for Human Performance™
Designing Human Agency in the Age of Intelligent Systems

THE CENTRAL IDEA

The Cognitive State Systems™ Codex introduces Cognitive Calibration for Human Performance™: a human-centered design discipline concerned with how people, environments, sensory conditions, purposeful practices, and increasingly intelligent systems can work together while human agency, judgment, consent, and purpose remain in control.

THE CENTRAL QUESTION

How should we intentionally design the relationship between increasingly capable technology and the human beings who use it?

FROM DISCIPLINE TO REAL-WORLD EXPERIENCE

- **Cognitive State Systems™** stewards the architecture.
- **SATA-CODA™** provides RESET · IGNITE · INTEGRATE.
- **DuME™ + DHI** shape and govern the human experience.
- **Calibration Console™** provides participant orientation, control, and return.
- **Human Upgrade Constellation™** provides a visual capability language.
- **ZENOASIS™** develops knowledge, education, assessment architecture, and evidence governance.
- **ZEN-TECH™** tests configurable deployments and controlled pilots.

THE GOVERNING PRINCIPLE

Technology should expand human capability without quietly replacing human judgment, dignity, consent, accountability, or authority. The system may recommend and assist; the participant remains the decision-maker.

WHAT THE FOUNDING EDITION ESTABLISHES

The Founding Edition documents the first coherent architecture and a framework designed to be taught, tested, challenged, researched, governed, and responsibly extended. Products, demonstrations, pilots, and partnerships are implementations and sources of evidence; they are not presented as scientific proof of biological, neurological, medical, or psychological outcomes.

PUBLIC OVERVIEW ONLY

The complete publication manuscript is not hosted publicly. Qualified publication, media, research, and professional review copies are available by request.
